

Essentials of Next Generation Sequencing Workshop 2024 July 22-25 | In-person and Online

The KY INBRE Essentials of Next Generation Sequencing Workshop (in partnership with University of Kentucky and University of Louisville), provides a ground-level introduction to analysis of NGS data using the command line interface. The goal of the FREE workshop is to introduce participants to the use of common (and open source) tools for data analysis (genomic, RNAseq). No prior experience with the Unix command line or NGS data analysis is required, but it is essential that all applicants have a good understanding of DNA/RNA/ protein biology, gene structure and expression.
